FCC INFORMATION

COMPLIANCE INFORMATION STATEMENT

(DECLARATION OF CONFORMITY PROCEDURE)

Responsible Party: Yamaha Electronics Corporation, USA.
Address: 6660 Orangethorpe Avenue
Buena Park, CA 90620
Telephone: 714-522-9105
Fax: 714-670-0108
Type of Equipment: CD Recordable/Rewritable Drive
Model Name: CRW3200IX

This device complies with Part 15 of the FCC Rules.

Operation is subject to the following conditions:

- 1) this device may not cause harmful interference, and
- 2) this device must accept any interference received including interference that may cause undesired operation.

See user manual instructions if interference to radio reception is suspected.

FCC INFORMATION (U.S.A.)

1. IMPORTANT NOTICE: DO NOT MODIFY THIS UNIT!

This product, when installed as indicated in the instructions contained in this manual, meets FCC requirements. Modifications not expressly approved by Yamaha may void your authority, granted by the FCC, to use the product.

2. IMPORTANT: When connecting this product to accessories and/or another product use only high quality shielded cables. Cable/s supplied with this product **MUST** be used. Follow all installation instructions. Failure to follow instructions could void your FCC authorization to use this product in the USA.

3. NOTE: This product has been tested and found to comply with the requirements listed in FCC Regulations, Part 15 for Class "B" digital devices. Compliance with these requirements provides a reasonable level of assurance that your use of this product in a residential environment will not result in harmful interference with other electronic devices. This equipment generates/uses radio frequencies and, if not installed and used according to the instructions found in the users manual, may cause interference harmful to the operation of other electronic devices. Compliance with FCC regulations does not guarantee that interference will not occur in all installations. If this product is found to be the source of interference, which can be determined by turning the product "OFF" and "ON", please try to eliminate the problem by using one of the following measures:
Relocate either this product or the device that is being affected by the interference.
Utilize power outlets that are on different branch (circuit breaker or fuse) circuits or install AC line filter/s.
In the case of radio or TV interference, relocate/reorient the antenna. If the antenna lead-in is 300 ohm ribbon lead, change the lead-in to coaxial type cable.

If these corrective measures do not produce satisfactory results, please contact the local retailer authorized to distribute this type of product. If you can not locate the appropriate retailer, please contact Yamaha Electronics Corporation, USA, 6660 Orangethorpe Avenue, Buena Park, CA 90620 U.S.A.

LASER INFORMATION

Laser Product Class: Class 1

Laser Diode Properties

Wavelength: 780 – 787 nm

Pulse Durations and Max. Output at the lens of the Laser Pickup Unit

Read Mode: 0.85 mW (Continuous)

Write Mode: Max. 48 mW
(for 212 ns, Min. Cycle 57.9 ns)

Laserprodukt-Klasse: Klasse 1

Eigenschaften der Laserdiode

Wellenlänge: 780 – 787 nm

Impulsdauer und max. Ausgang an der Linse der Laser-Abtasteinheit

Lesemodus: 0,85 mW (kontinuierlich)

Schreibmodus: Max. 48 mW
(für 212 ns, Zyklusmin. 57,9 ns)

Classe du produit laser: Classe 1

Caractéristiques de la diode laser

Longueur d'onde: 780 – 787 nm

Durée des impulsions et sortie maximum depuis la lentille du bloc capteur optique

Mode de lecture: 0,85 mW (continue)

Mode de gravure: max. 48 mW
(pour 212 ns, cycle min. 57,9 ns)

Clase de producto láser: Clase 1

Propiedades del diodo láser

Longitud de onda: 780 – 787 nm

Duración del pulso y potencia de salida máxima en el objetivo de la unidad captora láser

Modo de lectura: 0,85 mW (continua)

Modo de escritura: máx. 48 mW
(para 212 ns, ciclo mínimo 57,9 ns)

DANGER - VISIBLE AND / OR INVISIBLE LASER RADIATION WHEN OPEN. AVOID DIRECT EXPOSURE TO BEAM.

OWNER'S MANUAL

SAFETY PRECAUTIONS

PLEASE READ THE FOLLOWING WARNINGS AND CAUTIONS CAREFULLY TO PREVENT PERSONAL INJURY AND DAMAGE TO THE DEVICE.

These precautions explain how to use the device properly and safely, thereby preventing injury to yourself and others. This section has been sub-divided into a WARNING section and a CAUTION section, according to the likelihood and nature of any potential injuries or damage inflicted. They relate to your personal safety, and also help you prevent the risk of damage to the device. Please read these sections carefully prior to proceeding.

WARNING

Always follow these basic precautions to avoid short-circuit, damage, fire, or other hazards, and to avoid serious injury or fatal accident from electrical shock.

- Do not attempt to open or disassemble the device to avoid the risk of electrical shock, fire, or malfunction.
- Do not look directly at the laser source to avoid the risk of eye damage or blindness.
- Do not insert fingers or foreign objects into the device to avoid the risk of electrical shock, fire, malfunction, or personal injury.
- Do not expose the device to high humidity or place liquid containers such as a flower vase on the device to avoid the risk of electrical shock, fire, or malfunction.
- Do not expose the device to temperature outside the range 5 – 35 °C (41 – 95 °F) to avoid the risk of fire, deformation of the device panel, or malfunction.
- Do not expose the device to dusty place to avoid the risk of fire or malfunction.
- Always follow the owner's manual to set up or connect the devices properly to avoid the risk of electrical shock, fire, malfunction, or personal injury.
- If unusual smells, sounds or smoke come from the device, or if foreign objects such as liquid get into the device, turn off and unplug the computer immediately to avoid the risk of electrical shock, fire, or malfunction. Contact the store of purchase or your nearest Yamaha dealer (listed at the back of this manual).
- Be sure that the computer is electrically grounded to avoid the risk of electrical shock.
- Prior to cleaning the drive, always unplug the computer or do not handle the plug with wet hands to avoid the risk of electrical shock.
- Use the included AC adapter to avoid the risk of fire or malfunction.

- Clean the AC power plug regularly to avoid the risk of fire due to insulation failure such as humidity.
- Do not unplug the AC adapter by pulling the cable, and do not place objects on the cable to avoid the risk of electrical shock, fire, or malfunction.
- Plug in the AC adapter fully to avoid the risk of electrical shock or fire.
- Do not connect many devices to an electrical outlet. Maintain the rated power of the outlet to avoid the risk of fire due to overheating.

CAUTION

Always follow these basic precautions to avoid physical injury to yourself or others, and damage to the device or other property.

- Always unplug the computer if it will not be used for a prolonged period or if there is a possibility of lightning, to avoid the risk of electrical shock, fire, or short-circuit.
- Do not use the device near other electrical appliances such as televisions, radios, or speakers to avoid the risk of interferences between each other.
- Do not place the device unstably to avoid the risk of malfunction or personal injury by its falling down.
- Do not place the device with a possibility of excessive vibration to avoid the risk of damage to written data or malfunction.
- Place the device horizontally to avoid the risk of damage to written data.
- Prior to transporting the device, remove the disc from the disc tray to avoid the risk of damage to written data.
- Use soft, dry cloths to wipe the device. Do not use benzene, paint thinner, detergents, or chemically treated wiped cloths, and do not place vinyl, plastic, or rubber objects on the device to avoid the risk of malfunction or damage to the surface of the device.
- Do not rest your weight on or place heavy objects on the device, and do not apply excessive force to the buttons, switches, or connectors to avoid the risk of damage to the device or personal injury.
- Be careful not to short-circuit the AC power plug with metal objects to avoid the risk of malfunction.
- Do not wrap the power cable around the AC adapter to avoid the risk of breaking the wire or malfunction.

- Do not listen to audio with headphones at high volume for prolonged period to avoid auditory disorder.
- Prior to turning on the computer, always minimize the volume to avoid auditory disorder by a sudden burst of sound at high volume.
- Do not place the device near magnets or anything magnetized such as a display to avoid the risk of interferences between each other.
- Have the device serviced regularly to avoid internal dust buildup that can cause malfunction, damage or fire. For service information and service charges, contact the store of purchase or your nearest Yamaha dealer (listed at the back of this manual).

WARRANTY

YAMAHA AND ITS SUPPLIERS ACCEPT NO LIABILITY FOR ANY PROBLEMS THAT OCCUR AS A RESULT OF ANY OPERATIONS CARRIED OUT OTHER THAN THOSE STATED IN THE MANUAL THAT COMES WITH THIS PRODUCT, OR THE LOSS OR THE DAMAGE OF ANY DATA CAUSED AS A RESULT OF USING THIS PRODUCT.

Precautions for Transportation

Transporting the device unfixd may damage its internal mechanism or circuits.

- Remove the disc from the disc tray of the device.
- Put the device in the original box.

Prior to use, check that the complete accessories are included. (Refer to the original box.)

For details about how to install and use the CD writing software, refer to the documentation that comes with it.

- The information contained in this manual is subject to change without prior notice.
- Reproduction of this manual, either in part or in full, is expressly forbidden.

Features of the CRW3200IX Drive

High speed writing/reading

The CRW3200IX drive supports up to 24X-speed writing for CD-R discs, and up to 10X-speed writing/rewriting for CD-RW discs. In addition, the drive supports data reading and digital audio data extraction at up to 40X speed.

Tip

- The Partial CAV method permits 24X-speed writing for CD-R discs.
- The CLV method and the 4X – 10X Full CAV method permit 10X-speed writing/rewriting for CD-RW discs.

IEEE1394 interface

The CRW3200IX drive uses an IEEE1394 interface that enables you to use the drive as soon as it is connected to the computer.

The CRW3200IX drive supports a hot plug function that enables you to connect/disconnect the drive while the computer is turned on.

SafeBurn™ (Enhanced stability writing technology)

The generous 8 MB buffer memory provides sufficient data storage to enable stable disc writing at high speeds. Even if data transfer from the computer is interrupted, the Buffer Underrun Protection function is activated to save CD-R discs from a writing error. (P. 35)

“Optimum Write Speed Control” adjusts the writing speed to the optimum rate for every CD-R disc automatically. You can set the maximum writing speed with your CD writing software.

Note

- Optimum Write Speed Control can be activated when the maximum writing speed is set at 12X or more.
- The minimum writing speed to be automatically selected is 8X. Manually set the optimum writing speed if a writing speed supported by a disc is less than 8X.

High fidelity digital audio

The CRW3200IX drive supports extraction of digital audio data at up to 40X speed using CD writing software, as well as recording digital audio with high fidelity even at 24X-speed writing.

Audio Master Quality Recording (High quality audio writing mode)

Audio Master Quality Recording enables you to create high quality audio CDs. This mode is available for CD-R discs with a capacity of 650 MB and 700 MB. (P. 38)

Note

Audio CDs that are created with Audio Master Quality Recording may not be played back on certain audio recorders and CD-R/RW drives.

CD-MRW (CD Mount Rainier ReWriting)

CD-MRW is a new standard of packet writing. Compared to the ordinary packet writing, CD-MRW provides many useful functions such as background formatting. (P. 39)

Names and Functions of Parts

Front Panel

① Disc tray

Holds the disc. It is opened or closed by pressing the eject button. (P. 22)

② Manual eject hole

Forcibly opens the disc tray when the tray cannot be opened by pressing the eject button. (P. 23)

③ Eject button

Press to open or close the disc tray. (P. 22)

④ Headphone jack

Connects headphones or external speakers to the drive; has stereo mini-jack specifications.

⑤ Headphone volume dial

Controls the volume of the headphones. The volume increases as the dial is turned to the right.

⑥ LED

Indicates the operational status of the CRW3200IX drive by its colors and blinking patterns.

Lights or blinks blue

- Lights: Standby (with disc)
- Blinks: Opening/Closing disc tray, or reading disc information (TOC)
- Blinks rapidly: Playback audio
- Blinks irregularly: Reading data

Lights or blinks purple

- Lights: Standby (no disc) or the disc tray is open
- Blinks: Accessing for writing or test writing
- Blinks rapidly: Writing

Blinks orange

- Malfunction

Rear Panel

① **LINE OUT jacks (L/R)**

Connect audio devices such as external speakers.

② **POWER switch (STANDBY/ON)**

Turns the power on/off. (P. 11, 13)

③ **DC-IN connector**

Connects the included AC adapter. (P. 11)

④ **IEEE1394 ports**

Connect the included IEEE1394 cable.
(P. 13 for Windows, P. 18 for Macintosh)

Precautions on Use

Handling Discs

To avoid trouble, such as writing errors, loss of recorded data, and malfunction of the drive, take the following precautions when handling discs.

- Do not place discs in a hot or damp place or where they will be exposed to direct sunlight.
- Do not touch the disc surface. Hold the disc by the edge when handling it.
- Remove dust and dirt from the disc surface. Use an air spray to remove dust. The disc surface may be scratched if strongly wiped with a dry cloth.
- Do not stick labels to the disc surface or write anything on it except where designated.
- Do not clean discs with chemicals or detergents.
- Do not bend or drop discs.

Copyright

It is prohibited by law to duplicate copyright material for non-personal use without the prior consent of the copyright holder. When copying material with your CD-R/RW drive, take due care not to infringe the copyright.

Disclaimer of Indemnity

- Yamaha assumes no liability for the loss of any profits incurred as a result of the loss or corruption of data written on a CD-R or CD-RW, for any loss or damage caused by or arising out of extraordinary circumstances (including circumstances that Yamaha has foreseen or could foresee), nor for any damages incurred or claimed by a third party.
- After handling important data, make a comparison between the original and the copied data (to confirm that the data has been copied properly).
- In no event shall Yamaha be liable for any damage to discs due to a buffer underrun error (P. 35) or for any other reason, or the inability to use distributed discs with your drive.
- Yamaha assumes no liability for the inability to write/playback discs because of their format.

Compatible Discs

Discs that can be written on

The CRW3200IX drive can write on the following discs.

For the latest information about discs previously checked for compatibility with the drive, refer to the following website.

YAMAHA CD-R/RW Drive website

URL: <http://www.yamaha.co.jp/english/product/computer/>

CD-R discs

- The CRW3200IX drive can write at 1X, 2X, 4X, 8X, 12X, 16X or 24X speed.
- CD-R discs can be played back on a CD-ROM drive or a CD player.

Note

- 24X-speed writing is enabled with Partial CAV method. (P. 7)
- Check the writing speeds your disc supports prior to writing.

CD-RW discs

- The CRW3200IX drive can write/rewrite at 2X or 4X speed.
- CD-RW discs can be read/played back on a device (e.g. CD-ROM drive) that supports "CD-RW" discs.

Note

Some discs support only 2X speed.

High Speed CD-RW discs

- The CRW3200IX drive can write/rewrite at 4X, 8X or 10X speed.
- High Speed CD-RW discs can be read/played back on a CD-RW drive that bears the High Speed CD-RW logo or a device (e.g. CD-ROM drive) that supports "CD-RW" discs.

Note

- When using the packet writing method (P. 38) for writing/rewriting onto High Speed CD-RW discs, you can select the 4X – 10X Full CAV method. For more information refer to the documentation that comes with your CD writing software. (Your CD writing software must support the Full CAV method, as does the CD Writing software that comes with the CRW3200IX drive.)
- The Full CAV method is recommended when opening and editing a file on a CD-RW disc with an application software.
- In order to write, erase, read or play back High Speed CD-RW discs, use a CD-R/RW drive that bears the High Speed CD-RW logo. When using a CD-ROM drive to read/play back High Speed CD-RW discs, use a drive that supports CD-RW discs.

If these discs are used with a CD-R/RW drive not bearing the High Speed CD-RW logo, the discs may not be recognized, resulting in a computer not operating properly or other malfunctions occurring.

Refer to the YAMAHA website below prior to attempting to read/play back these discs on a YAMAHA CD-R/RW drive not bearing the High Speed CD-RW logo.

URL: <http://www.yamaha.co.jp/english/product/computer/>

Partial CAV (Constant Angular Velocity)

The CLV (Constant Linear Velocity) method is generally used to write data on a CD-R disc. In writing using the CLV method, the disc rotation speed is adjusted to keep the data writing speed (data transfer rate) constant on all parts of the disc.

In contrast, the CAV (Constant Angular Velocity) method exercises control so as to keep the disc rotation speed constant. Since the CAV method makes it possible to substantially increase the maximum data transfer rate without straining of the drive, it is adopted today for most CD-ROM drives.

CD formats define the constant linear density of written data so that the amount of written data per disc rotation will increase as the writing point moves from the inner track to the outer track.

With the CAV method, therefore, data is transferred at a higher rate when it is written on the outer tracks of the disc. To achieve 24X-speed writing, the CRW3200IX drive employs the Partial CAV method, which is a combination of the CAV method for inner tracks and the CLV method for outer tracks.

The Partial CAV method controls the disc rotation speed so that the CRW3200IX drive starts writing at 18X speed on inner tracks, increasing the speed to 24X as the read/write head moves outward and holds the speed at 24X on outer tracks.

Tip

The CRW3200IX drive supports 8 cm discs.

Note

Use only circular discs. Do not use any irregular shaped discs such as heart-shaped or star-shaped discs to avoid the risk of malfunction.

System Requirements

The CRW3200IX drive is designed to operate in the following computer environment. If your computer does not meet these requirements, the CRW3200IX drive may not operate or write at the maximum speed.

For Windows

Computer (PC/AT compatible)

- CPU: Pentium II-class or higher, 300 MHz or faster
- RAM: 64 MB or more
64 MB or more is required (128 MB is recommended) for Windows 2000 Professional, while 128 MB or more is required (256 MB is recommended) for Windows XP.

- CD-ROM drive

Note

The CRW3200IX drive cannot be used to boot the computer or to set up an operating system.

- Hard drive space

Writing data on a CD-R/RW disc requires 50 MB to 100 MB of free space as a working area on the hard drive. When writing data on a CD-R/RW disc after creating an image file, there must be enough free space on the hard drive to store the image file in addition to the working area (a total of up to 900 MB).

However, hard drive space for image files is not required when directly writing onto a CD-R/RW disc from a hard drive or CD-ROM using the CRW3200IX drive (on-the-fly writing).

 **Image file**

You can collect the data files to be written on a CD-R/RW disc into a single image file. The image file is useful for writing the same data onto multiple discs. For details, refer to the documentation that comes with the CD writing software.

- A spare PCI expansion slot or a CardBas slot for an IEEE1394 interface card (if one hasn't been installed or built-in)

- IEEE1394 port

An optional IEEE1394 interface card (OHCI compatible) is required to connect the CRW3200IX drive for the computer without an IEEE1394 port.

The IEEE1394 interface cards that have been already recognized to support the CRW3200IX drive are as follows.

Manufacturer	Product	Card Type
Advansys	ASB30400	PCI
SIIG	NN2603	PCI

For the latest information about IEEE1394 interface cards supporting the CRW3200IX drive, refer to the following websites.

YAMAHA CD-R/RW Drive website

URL: <http://www.yamaha.co.jp/english/product/computer/>

Note

Some IEEE1394 interface cards may not support the CRW3200IX drive. Even if the interface card operates properly in the computer, the interface card may not support IEEE1394 interface CD-R/RW drives. For details, refer to the documentation that comes with the IEEE1394 interface card.

Yamaha recommends that you use an IEEE1394 interface card listed above that has been recognized to support the CRW3200IX drive.

Continued on next page

Operating system

Windows 98 Second Edition, Windows Me, Windows 2000 Professional, or Windows XP.

CD writing software

The CRW3200IX drive requires CD writing software to write onto a CD-R/RW disc. Use the CD writing software that supports the CRW3200IX drive.

For details about installing and using the CD writing software, refer to the documentation that comes with the CD writing software.

For Macintosh

Computer (Macintosh with a FireWire port)

- CPU: PowerPC G3, 300 MHz or faster
- RAM: 64 MB or more
- CD-ROM drive

Note

The CRW3200IX drive cannot be used to boot the computer or to set up an operating system.

- Hard drive space

Writing data on a CD-R/RW disc requires 50 MB to 100 MB of free space as a working area on the hard drive. When writing data on a CD-R/RW disc after creating image file, there must be enough free space on the hard drive to store the image file in addition to the working area (a total of up to 900 MB).

However, hard drive space for image file is not required when directly writing onto a CD-R/RW disc from hard drive or CD-ROM using the CRW3200IX drive (on-the-fly writing).

Image file

You can collect the data files to be written on a CD-R/RW disc into a single image file. The image file is useful for writing the same data onto multiple discs. For details, refer to the documentation that comes with the CD writing software.

Operating system

Mac OS 8.6 and 9 to 9.2 (Classic API with Mac OS X is not supported.)

CD writing software

The CRW3200IX drive requires CD writing software to write onto a CD-R/RW disc. Use the CD writing software that supports the CRW3200IX drive.

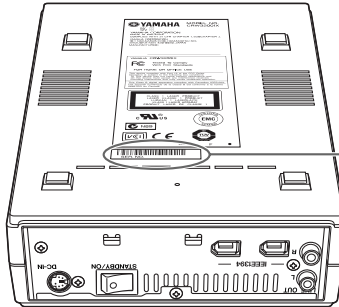

For details about installing and using the CD writing software, refer to the documentation that comes with the CD writing software.

Preparing the CRW3200IX Drive

Serial Number

The serial number is printed on the label on the bottom of your CRW3200IX drive. When you have a question about the drive or need user support services, the serial number is required.

Please write the serial number down in the space below. It may be difficult to check the serial number after setting up the drive or for any other reason.

Serial number
(10 characters: 3 letters +
7 numbers)

Serial Number										
---------------	--	--	--	--	--	--	--	--	--	--

Set Up the CRW3200IX Drive on Windows

Note

Place the CRW3200IX drive horizontally.

- 1 Remove all IEEE1394 devices connected to the computer, and turn on the computer.**
- 2 Be sure that the power switch on the rear panel of the CRW3200IX drive is turned off (STANDBY), and connect the included AC adapter to the DC-IN connector of the drive.**

The arrow on the adapter plug faces to the screw (the left side of the connector).

-
- 3 **Connect the included power cable to the AC adapter (①).
Connect the other end of the power cable to the wall socket (②).**

Note

- Use the included AC adapter only. Do not use other adapters.
- The AC adapter may become warm during use under normal conditions.
- The AC adapter consumes power, shown in the table below, while connected to the wall socket even if the power switch of the CRW3200IX drive is turned off. Remove the power cable from the wall socket when not using the CRW3200IX drive for a prolonged period.

Power source	Power consumption
100 V, 120 V	0.8 W
220 V	0.9 W
230 V, 240 V	1.0 W

4 Turn on the power switch of the CRW3200IX drive.

Note

When turning on the CRW3200IX drive, be sure that the LED on the front panel blinks blue and then lights purple. (P. 3)

5 Connect the CRW3200IX drive and the computer with the included IEEE1394 cable.

Note

The included IEEE1394 cable has a 6-pin IEEE1394 connector at each end. Depending on your computer environment such as a laptop computer with a 4-pin type IEEE1394 port, an IEEE1394 cable with a 4-pin IEEE1394 connector at one end may be required.

6-pin IEEE1394 connector

4-pin IEEE1394 connector

Connecting to a desktop computer

Connecting to a laptop computer

Note

- You can connect the IEEE1394 cable to either IEEE1394 port of the CRW3200IX drive.
- The IEEE1394 standards define the maximum length of a single IEEE1394 cable as 4.5 meters.
- To connect multiple IEEE1394 devices, refer to “Connecting Multiple IEEE1394 Devices.” (P. 36)

6 Check recognition of the CRW3200IX drive.

After connecting the CRW3200IX drive to the computer, follow the steps below to check that the drive is recognized properly by the computer.

For Windows 98 Second Edition/Me

- 1 Select **Start** on the task bar, then **Settings, Control Panel, System,** and **Device Manager** tab. The **Device Manager** dialog box appears.

Note

For Windows Me, if the **System** icon is not found in the **Control Panel** window, click **view all Control Panel options** on the left side of the window.

- 2 Check that the following icons are shown.

- a: "1394 Bus Controller" (Fig.1)
- b: "YAMAHA CRW3200E" in the "CDROM" item (Fig.1)
- c: "SBP2 Compliant IEEE 1394 device" in the "SBP2" item (Fig.2)

Figure 1

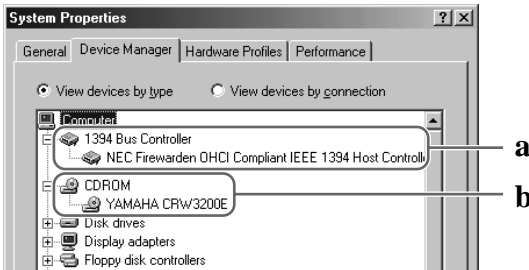

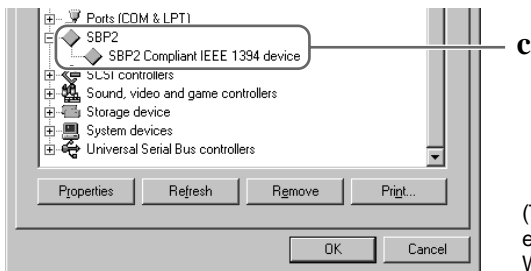

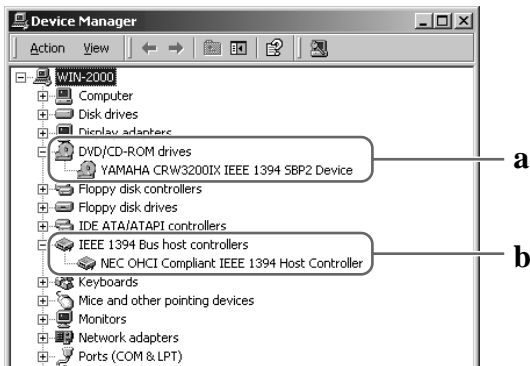

Figure 2 (scroll down)

(This screen is an example on Windows Me.)

For Windows 2000 Professional

- 1 Select **Start** on the task bar, then **Settings, Control Panel, System, Hardware** tab, and **Device Manager**. The **Device Manager** dialog box appears.
- 2 Check that the following icons are shown.
 - a: “YAMAHA CRW3200IX IEEE 1394 SBP2 Device” in the “DVD/CD-ROM drives” item
 - b: “IEEE 1394 Bus host controllers”

For Windows XP

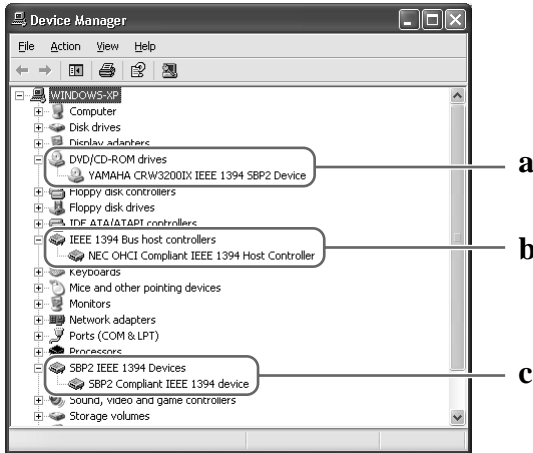

- 1 Select **Start** on the task bar, then **Control Panel, System, Hardware** tab, and **Device Manager**. The **Device Manager** dialog box appears.

Note

If the **System** icon is not shown in the **Control Panel** window, click **Switch to Classic View** on the left side of the window.

Continued on next page

- 2 Check that the following icons are shown.
- a: “YAMAHA CRW3200IX IEEE 1394 SBP2 Device” in the “DVD/CD-ROM drives” item
 - b: “IEEE 1394 Bus host controllers”
 - c: “SBP2 Compliant IEEE 1394 device” in the “SBP2 IEEE 1394 Devices” item

The drive name is not shown or there is  or  mark.

The CRW3200IX drive has not been recognized properly. Check the cable connections and settings.

7 Install CD writing software.

Install the CD writing software. For details about how to install CD writing software, refer to the documentation that comes with it.

Set Up the CRW3200IX Drive on Macintosh

Note

Place the CRW3200IX drive horizontally.

- 1 Follow page 11 – 13, and connect the AC adapter to the CRW3200IX drive. Turn on the drive.
- 2 Connect the CRW3200IX drive and the computer with the included IEEE1394 cable.

Note

- You can connect the IEEE1394 cable to either IEEE1394 port of the CRW3200IX drive.
- The IEEE1394 standards define the maximum length of a single IEEE1394 cable as 4.5 meters.
- To connect multiple IEEE1394 devices, refer to “Connecting Multiple IEEE1394 Devices.” (P. 36)

3 Check recognition of the CRW3200IX drive.

After connecting the CRW3200IX drive to the computer, follow the steps below to check that the drive is recognized by the computer properly.

- 1 Select **Apple System Profiler** from the Apple menu.
- 2 Select **Devices and Volumes**.
- 3 “fw609e” and “sbp609e” (or drive names in some versions) in the “FireWire” column should be shown when the CRW3200IX drive has been recognized properly.

The FireWire version is shown in this window.

The FireWire version is shown.

The FireWire version is shown.

Note

- In the case that other FireWire storage devices such as a hard drive or an MO drive are connected to the computer, “fw609e” and “sbp609e” are shown in the column when any device is recognized. To check that the CRW3200IX drive is recognized properly, un-mount icons of those devices, and then remove those devices temporarily.
- If the “FireWire” item is not shown, the FireWire interface of the computer is not recognized by the Mac OS. Contact the manufacturer of the computer.
- If the “fw609e” and “sbp609e” (or drive names in some versions) are not shown even with the “FireWire” item shown, the CRW3200IX drive is not recognized by the Mac OS. In such a case, contact the store of purchase or your nearest Yamaha dealer (listed at the back of this manual).
- The FireWire version in Mac OS that supports the CRW3200IX drive is 2.0 or later.
- The extension files that support the CRW3200IX drive are required to mount and read the disc even if the drive is recognized by Apple System Profiler. The extension files come with the CD writing software. For details, refer to the documentation that comes with the CD writing software.

4 Install the CD writing software.

Install the CD writing software. For details about how to install the CD writing software, refer to the documentation that comes with it.

“CRW3200E” (device name) corresponding to the CRW3200IX drive (product name) will be shown on your CD writing software when the drive is recognized by the CD writing software properly.

For details about how to check recognition of the CRW3200IX drive with the CD writing software, refer to documentation that comes with the CD writing software.

Connecting/Disconnecting the CRW3200IX Drive to/from the Computer

The CRW3200IX drive can be connected/disconnected while the computer is turned on (hot plug).

However, follow the steps below to disconnect the CRW3200IX drive while the computer is turned on.

- 1 Quit the writing software if it is activated.
- 2 Be sure to remove any disc from the disc tray.
- 3 For Windows Me/2000 Professional, select **Unplug or Eject Hardware** on the task bar and follow the steps on the screen to disconnect the drive.
For Windows XP, select **Safely Remove Hardware** on the task bar and follow the steps on the screen to disconnect the drive.
For Macintosh, disconnect the CRW3200IX drive.

(This screen is an example on Windows Me.)

Note

- For Windows 98 Second Edition, do not disconnect IEEE1394 device from the computer turned on to avoid improper operation.
- Be sure not to disconnect the CRW3200IX drive or connect/disconnect other IEEE1394 devices from the computer when writing with the drive.

Be sure not to turn off the CRW3200IX drive when the drive is connected to the computer turned on. The computer or other IEEE1394 devices may not operate properly depending on a type of host adapter or a CD writing software. Disconnect the CRW3200IX drive from the computer prior to turning off the drive.

Loading/Ejecting a Disc

Prior to the operation, check that the CRW3200IX drive is turned on.

- 1 Open the disc tray by pressing the eject button.**

Press the eject button.

- 2 Place the disc onto the disc tray properly with its label facing upward.**

Or remove the disc from the disc tray carefully so not to damage it.

Place or remove the disc onto/from the disc tray.

- 3 Close the disc tray by pressing the eject button or by gently pushing the disc tray into the drive.**
-

Note

- Place or remove the disc after the disc tray has fully opened. Do not push or pull the disc tray with applying excessive force to avoid damage to the drive or the disc.
- The disc tray does not open while the application software prohibits ejecting, including when the drive accesses the disc.

Manually Ejecting a Disc

If the disc tray fails to open for some reason, such as a power failure, follow the steps below to remove the disc from the drive.

Note

Frequent use of this operation may cause malfunction of the drive.

1 Prepare a thin pin-like object, such as a straightened paper clip.

Use an object less than 2 mm in diameter and more than 3 cm in length.

2 Turn off the CRW3200IX drive.

3 Insert the thin pin-like object straight into the manual eject hole, and push it in.

When the disc tray opens, remove the disc.

4 Turn on the CRW3200IX drive, and close the disc tray.

Troubleshooting

Refer to the YAMAHA CD-R/RW Drive website for the latest support data, including information on troubleshooting.

YAMAHA CD-R/RW Drive website

URL: <http://www.yamaha.co.jp/english/product/computer/>

Europe

URL: <http://www.yamaha-it.de/>

1 The CRW3200IX drive is not turned on when the power switch is ON. (The front panel LED does not light.)

● Are the AC adapter and the power cable connected properly?

Turn off the power switch and check that the CRW3200IX drive, the AC adapter, the power cable, and the AC outlet are connected properly. (P. 11, 12)

If not, connect them properly, and then turn on the CRW3200IX drive.

If the CRW3200IX is not turned on (the front panel LED does not light) even if they are connected properly, contact the store of purchase or your nearest Yamaha dealer (listed at the back of this manual).

2 The operating system does not start up properly.

● Is the IEEE1394 interface card installed properly?

Refer to the documentation that comes with the IEEE1394 interface card.

3 The CRW3200IX drive is not recognized by the operating system. (Refer to page 15 for Windows or page 19 for Macintosh to check recognition of the CRW3200IX drive.)

● Are the drive and IEEE1394 interface card connected properly to the computer with a proper IEEE1394 cable?

Turn off the CRW3200IX drive and the computer. Check that the IEEE1394 cable is fully connected to the CRW3200IX drive. (P. 13 for Windows, P. 18 for Macintosh)

● Is the IEEE1394 interface card recognized by the operating system properly?

Follow the documentation that comes with the IEEE1394 interface card or the computer, and check that the IEEE1394 interface card is recognized by the operating system properly.

If the IEEE1394 interface card is recognized, contact the store of purchase or your nearest Yamaha dealer (listed at the back of this manual).

If not, refer to the documentation that comes with the IEEE1394 interface card or the computer. If the IEEE1394 interface card is still not recognized, there may be a problem with the device driver or elsewhere.

Contact the manufacturer of the IEEE1394 interface card or the computer.

4 The disc tray does not open when you press the eject button.

- **Is the CRW3200IX drive turned on? (Does the LED on the front panel light?)**
Refer to “The CRW3200IX drive is not turned on when the power switch is ON. (The front panel LED does not light.)” (Troubleshooting, Item 1)
- **Is any CD writing software being used?**
Some CD writing software prohibits ejecting while accessing. (If you are using such a software program, the disc tray does not open even if the eject button is pressed.) In such a case, follow the steps in the software window to eject the disc, or quit the CD writing software prior to pressing the eject button.
- **Is the disc icon shown on the screen? (For Macintosh)**
When the disc icon is shown on the screen, the eject button cannot be used. Drag the disc icon into the **Trash** and drop it there to unmount the disc to open the disc tray.
- **Is the disc tray opened when the computer is restarted?**
Quit all running application software, restart your computer, and press the eject button of the CRW3200IX drive.
For Macintosh, when the disc icon is shown on the screen, the eject button cannot be used. Drag the disc icon into the **Trash** and drop it there to unmount the disc to open the disc tray.
- **Is the disc tray opened when the IEEE1394 cable is removed from the CRW3200IX drive?**
Remove the IEEE1394 cable from the drive while the AC adapter is connected, and press the eject button.
- **Turn off the computer and the CRW3200IX drive, and remove the disc following “Manually Ejecting a Disc.” (P. 23)**
If the disc tray is caught in the drive and does not come out, or if it cannot be opened or closed using the eject button after it is pulled out manually, contact the store of purchase or your nearest Yamaha dealer (listed at the back of this manual).

5 The disc is ejected without order (or it comes out spontaneously).

- **Is the disc set properly (horizontally) on the disc tray?**
Set the disc properly, and close the disc tray.
- **Is the disc dusty or dirty?**
Remove dust or dirt from the disc using an air spray or a dry soft cloth. To avoid damaging discs, wipe the disc gently from the center perpendicular to the edge of the disc.

-
- **Does the drive accept other discs (audio CD, CD-ROM, blank CD-R disc, etc.)?**

If a specific disc is ejected, the disc itself may be damaged or deformed.

If all discs are ejected, contact the store of purchase or your nearest Yamaha dealer (listed at the back of this manual).

6 No data can be read from a disc.

- **Is the disc ejected without order?**

Refer to “The disc is ejected without order (or it comes out spontaneously).”

(Troubleshooting, Item 5)

- **Is the disc compatible with the drive? (P. 6, 31)**

Be sure that the disc is compatible with the CRW3200IX drive.

- **Is the disc dusty or dirty?**

Remove dust or dirt from the disc using an air spray or a dry soft cloth. To avoid damaging discs, wipe the disc gently from the center perpendicular to the edge of the disc.

- **Can data be read from other discs (audio CD, CD-ROM, etc.)?**

If no data can be read from a specific disc, data may be written in a format that the drive cannot recognize, or the disc itself may be damaged or deformed. Note that no data can be read from blank discs, and the CRW3200IX drive infrequently fail to read data correctly from a disc even if the disc is compatible with the drive.

- **Are the extension files supporting the CRW3200IX installed? (For Macintosh)**

If the extension files supporting the drive are not installed, the disc cannot be mounted or read. The extension files come with the CD writing software.

For details, refer to the documentation that comes with the CD writing software.

- **Does the LED on the front panel of the CRW3200IX drive light correctly when a disc is inserted?**

When a disc is inserted, the LED will blink blue for a moment and then light blue. (P. 3)

If no data can be read from a specific disc, data may be written in a format that the drive cannot recognize, or the disc may be damaged or deformed.

If the LED on the front panel remains purple (stating that the drive cannot recognize the disc) no matter what type of disc is inserted, contact the store of purchase or your nearest Yamaha dealer (listed at the back of this manual).

7 The playback of an audio CD (CD-DA) cannot be heard.

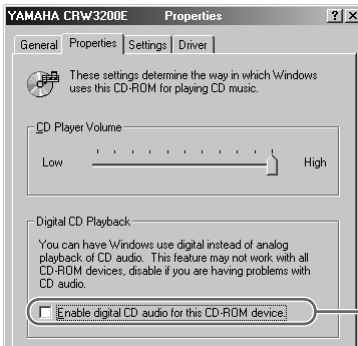

Check that the volume is not set to the minimum level.

Be sure that headphones or external speakers are properly connected to the CRW3200IX drive.

For Windows Me/XP, change the settings as follows. (If Windows Media Player 7.0 or later is used with Windows Me/XP, this problem can happen since the digital playback option is activated by default setting.)

For Windows Me

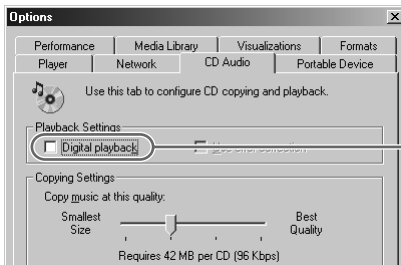

- 1 In the **Device Manager** dialog box (P. 15), select **YAMAHA CRW3200E Properties** and then **Properties** tab.
- 2 Uncheck the “Enable digital CD audio for this CD-ROM device” in the “Digital CD Playback” item.

Uncheck
(This screen is an example
on Windows Me.)

- 3 Start “Windows Media Player.” In the menu bar, select **Tools, Options** and **CD Audio** tab.

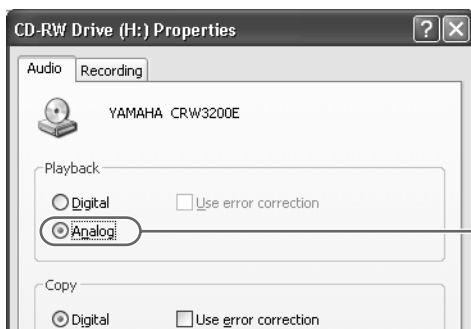

- 4 Uncheck the “Digital playback” in the “Playback Settings” item.

Uncheck
(This screen is an
example on Windows
Media Player 7.0.)

For Windows XP

- 1 Follow page 27 “For Windows Me”, and uncheck the “Enable digital CD audio for this CD-ROM device.”
- 2 Start “Windows Media Player.” In the menu bar, select **Tools, Options, Devices** tab, **CD-RW Drive**, and **Properties**.
- 3 Select “Analog” in the “Playback” item.

Select
(This screen is an
example on Windows
Media Player 8.0.)

- 8 **No data can be read from any CDs, a disc is ejected spontaneously, or the LED remains purple when a disc is inserted. (The LED does not change from lighting purple to blinking blue and then lighting blue.) (P. 3)**

Disconnect the IEEE1394 cable from your drive while the AC adapter is connected. Insert the disc once again. If a specific disc is automatically ejected or cannot be read, the disc itself may have a problem. If the drive does not accept any compatible discs (and the LED remains purple), contact the store of purchase or your nearest Yamaha dealer (listed at the back of this manual).

9 The error message “Buffer Underrun” is shown.

If your CD writing software supports Buffer Underrun Protection, you must activate it. For details, refer to the documentation that comes with your CD writing software.

To prevent the occurrence of a buffer underrun and to increase the efficiency of data writing, try the following:

- Reduce the data writing speed.
- Create an image file on the hard drive.
- Optimize the hard drive. (Defragmentation)
- Do not start any application software including screen savers during data writing.
- Deactivate the power management for the hard drive.
- Set the data transfer mode of any IDE device such as a hard drive or CD-ROM drive to DMA.
- Deactivate the Windows Active Desktop.
- Quit all memory-resident software programs.
- Check your CD writing software settings with the documentation that comes with it.

Note

- If there is an IEEE1394 device with lower data transfer speed connected between the computer and the CRW3200IX drive, the data transfer between those two will be slowed, which may cause failure in writing a disc.
- A writing error may happen if the drive is vibrated while data is being written on a CD-R or a CD-RW disc.

10 Other problems

● Isn't more than one CD writing software installed in your computer?

Installing more than one CD writing software in a computer may cause instability of operation.

● CD writing software must support the CRW3200IX drive in order to recognize the drive.

Contact the manufacturer of your CD writing software to see whether the software supports the CRW3200IX drive.

Firmware

Firmware refers to the operating software designed for your CD-R/RW drive. It is stored in the drive's flash memory so that it can be rewritten.

To enhance operation reliability, Yamaha continues improving the firmware and makes updates available on the internet. You can find information about the latest firmware at the following websites.

YAMAHA CD-R/RW Drive website

URL: <http://www.yamaha.co.jp/english/product/computer/>

Europe

URL: <http://www.yamaha-it.de/>

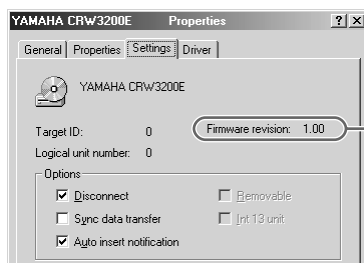

These websites contain the latest YAMAHA CD-R/RW drive user support information including information about the firmware.

Refer to the website regularly to check the latest information.

Checking the firmware version in the CRW3200IX drive

For Windows 98 Second Edition/Me

In the **Device Manager** dialog box (P. 15), select **YAMAHA CRW3200E** to display the **YAMAHA CRW3200E Properties** dialog box, and then select the **Settings** tab.

The revision number shown here varies depending on the version of the firmware in the drive as set at default. (This screen is an example on Windows Me.)

For Windows 2000 Professional/XP

The firmware version cannot be shown with **Device Manager** dialog box. Check the firmware version with the CD writing software. For details about how to use the software, refer to the documentation that comes with it.

For Macintosh

Check the firmware version with the CD writing software. For details about how to use the software, refer to the documentation that comes with it.

Writing Methods

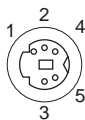

Disc-at-Once (DAO)
 Session-at-Once (SAO)
 Track-at-Once (TAO)
 Packet Writing
 Audio Master Quality Recording (High quality audio writing mode)
 CD-MRW (CD Mount Rainier Rewriting)

Writing/Reading Speed

Writing	CD-R	1X, 2X, 4X, 8X, 12X, 16X (CLV), 24X (18X – 24X Partial CAV)
	CD-RW	2X, 4X, 8X, 10X (CLV), 4X – 10X Full CAV (Packet writing)
Reading	40X (max.) Full CAV Note) • DATA: 40X (max.) • CD-DA: 40X (max.) in audio extraction • CD-DA: 1X only in audio playback • Video CD: 10X (max.) • Session closed disc: 40X (max.) • Session unclosed disc: 12X (max.)	
CD-R	1X, 2X, 4X, 8X, 12X, 16X, 24X (18X – 24X Partial CAV) writing: CD-R discs specified in Orange Book Part 2, Ver. 3.1. Note) Use a CD-R disc that matches the writing speed.	
CD-RW	2X or 4X writing: Orange Book Part 3, Vol.1, Ver. 2.0-compliant discs 4X, 8X, 10X, 4X – 10X Full CAV (Packet writing) writing: Orange Book Part 3, Vol.2, Ver. 1.0-compliant discs Note) For 2X writing, Book Part 3, Vol.1, Ver. 1.0-compliant discs can be used.	

Data Capacity	700 MB (with a 79-minute disc) 650 MB (with a 74-minute disc) 550 MB (with a 63-minute disc)
Maximum Recording Time in Audio Master Quality Recording	68 min. (700 MB) 63 min. (650 MB)
Data Transfer Rate (Mode 1)	1X: 150 KB/sec. 12X: 1,800 KB/sec. 2X: 300 KB/sec. 16X: 2,400 KB/sec. 4X: 600 KB/sec. 24X: 3,600 KB/sec. 8X: 1,200 KB/sec. 32X: 4,800 KB/sec. 10X: 1,500 KB/sec. 40X: 6,000 KB/sec.
Interface	IEEE1394-a compliant, 400 Mbps Two 6-pin connectors (power not supplied to connectors [port])
Data Buffer Size	8 MB (3,176 sectors)
Average Access Time	130 msec. (random access)
Sector Size	2,048 – 2,448 bytes
Installing Style	Horizontal
Disc Loading Type	Front auto-loading tray type
Audio Out	Line Out specifications • Frequency Band: 20 – 20,000 Hz • Output level: 700 mVrms
Power Consumption	18 W (writing/playback) 7 W (standby)
Operating Environment	Temperature : +5 – +35 °C Humidity : 25 – 80% RH (no condensation)
Dimensions	Width : 164.0 mm Height : 56.0 mm Depth : 265.0 mm
Weight	1.6 kg

AC adapter (AD-301205)

Rated Input Voltage	100 – 240 V AC
Rated Input Current	1.0 A or less
Rated Output Voltage	+5 V, +12 V DC
Rated Output Current	1.5 A
Terminal Output Polarity	 <ul style="list-style-type: none"> 1: +12 V DC 2: GND 3: +5 V DC 4: GND 5: +5 V DC
Operating Environment	Temperature: +5 – +35 °C Humidity : 25 – 80% RH (no condensation)
Dimensions (includes projection)	Width : 79.5 mm Height: 32.0 mm Depth : 147.0 mm
Weight (includes the power cable)	430 g (approx.)

Safety/EMC Compliance

The CRW3200IX drive conforms to the following specifications.

Country/ Region	Compliance Specifications			Remarks
	Standard	Item	Name and Number	
USA	Safety	Electricity	UL60950	Information Technology Equipment
		Laser	21CFR1040.10 FDA Chapter 1, Subchapter J	Class I Laser Product
	EMC	Emission	47CFR15 FCC Part 15, Subpart B	Peripheral Device
Canada	Safety	Electricity	CSA C22.2 No. 60950	Information Technology Equipment
	EMC	Emission	ICES-003	Class B Digital Device
EU	Safety	Electricity	EN60950	Information Technology Equipment
		Laser	EN60825	Class 1 Laser Product
	EMC	Emission	EN55022	Class B Information Technology Equipment
		Immunity	EN55024 EN61000-3-2 EN61000-3-3	
Australia New Zealand	EMC	Emission	AS/NZ 3548	Class B Information Technology Equipment
Japan	Safety	Electricity	Electrical Appliance and Material Safety	
	EMC	Emission	VCCI	Class B Information Technology Equipment

Note that the specifications of the CRW3200IX drive are subject to change without notice due to improvements.

Technical Notes

IEEE1394

IEEE1394 is a global standard approved by Institute of Electrical and Electronics Engineers (IEEE). The serial interface has a broad bandwidth and is fast enough to transfer large amounts of digital video and audio data bi-directionally between electronic devices including computer peripherals. Defined as FireWire or i.LINK, the IEEE1394 interface enables units to transfer data or various controls over a single IEEE1394 cable. IEEE1394 enables a daisy-chain of devices (serial connection) to transfer data between any two devices in the chain. IEEE1394 also supports a tree (parallel) collection of devices. In addition to this flexibility, IEEE1394 also eliminates the need for complicated settings such as device ID and termination as found with SCSI (Small Computer System Interface) type interfaces. As of this writing, IEEE1394 supports three different data transfer rates: 100 Mbps, 200 Mbps, and 400 Mbps.

Buffer Underrun Protection Function

CD-R/RW drives are equipped with a buffer memory, which temporarily stores data that is being transferred. When the buffer memory becomes empty due to a delay of data transfer for any reason, a writing error happens. Such condition is defined as buffer underrun, and such an error is defined as a buffer underrun error.

Buffer Underrun Protection is featured in the CRW3200IX drive.

When buffer underrun almost happens, Buffer Underrun Protection temporarily suspends the writing process. Writing resumes when enough data has accumulated in the buffer memory. Buffer Underrun Protection in the CRW3200IX drive is extremely accurate, resulting in seamless recording before and after suspension.

Test writing

Test writing is a function to check for the possible occurrence of buffer underrun in your computer environment. When Buffer Underrun Protection of the CD writing software is activated, the test writing function cannot be operated. Buffer Underrun Protection should be deactivated to operate the test writing function.

Connecting Multiple IEEE1394 Devices

The following describes how to connect multiple IEEE1394 devices including the CRW3200IX drive to the computer.

Connecting in a daisy-chain

This method is used to connect in series multiple IEEE1394 devices to one IEEE1394 port. Up to 17 IEEE1394 devices (including the host adapter) can be connected through one channel.

Connecting in a tree

This method is used to connect in branches multiple IEEE1394 devices through the device, host adapter for example, with more than two IEEE1394 ports. Up to 63 IEEE1394 devices (including the host adapter) can be connected.

- Each path (A-B, A-C, B-C) can contain up to 17 devices including the host adapter.
- An entire system can contain up to 63 devices including the host adapter.

Note on Connecting IEEE1394 Devices

- Connect the CRW3200IX drive directly to the computer.
- If there is an IEEE1394 device with lower data transfer speed connected between the computer and the CRW3200IX drive, the data transfer between those two will be slowed, which may cause failure in writing a disc.
- The IEEE1394 ports on the CRW3200IX drive have 6-pin connectors, but do not supply power (IEEE1394 bus power).
- Be sure not to connect the devices with closed-loop as follows.

Writing Methods

Disc-at-Once (DAO)

This method is used to write all data onto a disc in one operation. It writes multiple pieces of data without placing a space between data, starting with the innermost track of the disc. Once data is written by this method, no data can be added to the same disc even if there is free space available on the disc. This method is useful for making a backup copy of an entire disc.

Track-at-Once (TAO)

This method is used to write data on a disc on a track-by-track basis. A track can be defined as the smallest unit of area that contains an ordinary program, image file, text file, etc. This method enables you to add data to the same disc, one track of data at a time, as long as there is free space available on the disc. A disc that contains data written in several sessions is defined as a multi-session disc.

An area that records data and management information (Lead-in/Lead-out) is defined as a session. Lead-in and Lead-out are signals written for stating the starting and ending points of one session.

Note

Ordinary audio CD players can only play back single-session discs or the first session on a multi-session disc. Do not record audio data on the second and subsequent sessions.

Session-at-Once (SAO)

This method is used to write data on a disc on a session-by-session basis. Unlike Track-at-Once described above, Session-at-Once enables you to record multiple tracks onto a disc at a time. CD EXTRA, for example, uses this method to write multiple pieces of audio data (or multiple tracks) in the first session and information required for computers in the second session. This method enables you to add data into the same disc, one session at a time, as long as there is free space available on the disc. A disc that contains data written in several sessions by this method is defined as a multi-session disc, like a disc written by the Track-at-Once method.

Packet Writing

This method is used to record data onto a disc on a file-by-file basis. This method divides a track into small segments called “packets” so that data can be written on a packet-by-packet basis, which means that you can write data in much the same way as you copy data to a floppy or hard drive. Since the data can be written easily, packet writing is proper to daily data backup. Packet writing also enables you to add packets to a disc as long as there is free space available on the disc.

Note

- Discs need to be formatted for packet writing prior to use.
- Formatting a CD-RW disc using packet writing software reduces its storage capacity by about 100 MB since packet writing requires exclusive space for itself.
- For CD-R discs, deleting data means masking data but not actually removing data. Therefore, actual free space in a CD-R never be increased even if data is deleted.

Audio Master Quality Recording (High quality audio writing mode)

This method enables you to record high quality data that can be played back with the 1.4 m/s linear velocity.

Note

- Audio Master Quality Recording (High quality audio writing mode) is enabled with the 4X speed Disc-at-Once writing method.
- Maximum recording time is 63 minutes for a 650 MB CD-R disc and 68 minutes for a 700 MB CD-R disc.

CD-MRW (CD Mount Rainier ReWriting)

This method is a new standard of packet writing for a CD-RW disc and supports defect control by the drive, background formatting, and disc ejecting during formatting. It enables you to use a CD-RW disc like a floppy disk.

Note

Formatting a CD-RW disc using CD-MRW reduces its storage capacity by about 150 MB since CD-MRW itself requires exclusive disc space.

Distributors and Head Offices / Vertriebs- und Hauptgeschäftsstelle Distributeurs et sièges sociaux / Distribuidores y Casas matrices

If you have any questions, please contact the store of purchase or your nearest Yamaha dealer listed below. Contact Yamaha Corporation Japan from outside of the listed countries.

Falls Sie weitere Fragen haben, wenden Sie sich an Ihren Fachhändler oder den örtlichen Yamaha-Händler (eine Liste der Yamaha-Händler befindet sich am Ende dieses Handbuchs). Aus anderen Ländern als den aufgeführten wenden Sie sich an Yamaha Corporation Japan.

Si vous avez des questions à poser, veuillez prendre contact avec le magasin où vous avez fait l'achat de l'appareil ou un revendeur de matériel Yamaha le plus proche de votre domicile parmi ceux énumérés ci-dessous. Prenez contact avec Yamaha Corporation Japan si vous ne vous trouvez pas dans un des pays mentionnés:

Si tiene alguna duda, póngase en contacto con el establecimiento de adquisición o con su representante Yamaha más cercano indicado a continuación. En caso de países no contemplados en la lista, póngase en contacto con Yamaha Corporation Japan:
